9414.	Armstrong,	S. J.	Passed Asst. Surg. U.S. Marine H. S.	Right kidney, showing deep transverse fissure midway of posterior surface, probably congenital, well marked, cirrhosis and somatophy. Left kidney extremely atrophied, measuring only 2 inches long, 3/4 inch thick, and one half thick; pelvis of ureter large, much thickened, and contains calculus size of a pea. - Thomas Doran, English.	
9415.	"	"	"	Left foot and lower third of leg, showing general hypertrophy, the foot in position of talipes equinovarus. Richard Bailey, a negro, amputation above knee for elephantiasis.	
9416.	Black,	J. E.	Surgeon, City Hosp., Memphis, Tenn.	Portion of flat tumor, probably fibroma, removed from surface of nose after death. Mulatto boy, aged 11 years. Tumor congenital. Died from tetanus after attempted removal of tumor.	See A. M. M. No 1771. Contributed Photograph. Specimens Photo. forwarded by P. A. Surg. S. F. Armstrong, U. S. M. H. S.
9417.	Thornton,	G. B.	Surgeon to C. O. & S. W. R. R. Memphis, Tenn.	Portion of small intestine, showing rounded opening (knife wound) 1/4 inch in diameter with everted, thickened edges and surrounding lymph deposit. This piece was resected from No 9418, which shows the cut tips in intestine and mesentery. Several inches beyond the suture to an adjacent portion of small intestine showing an opening 1/4 inch in diameter corresponding with the adhesion, and said also to have been a knife wound.	Specimens forwarded by P. A. Surgeon S. F. Armstrong, U. S. M. H. S.
9418.	"	"	"	Richard Moody, colored, train porter, stabbed at depot.	
9419.	Martigan,	J. F.	M. D.	Portion of small intestine, showing oval longitudinal perforation 3/8 inch in long diameter, with everted edges involving a Peyer's patch. - Patrick Bennett, kicked in abdomen. Died 12 hrs. afterwards.	
9420.	Patterson,	D. C.	M. D.	Ileo-colic portion of intestine, showing enlarged Peyer's patches and solitary follicles; purpura of ileocecum. Emma Brown, Mulatto girl, aged 2 years.	See A. M. M. No 1741. Prov. Path. Series, No 212. Prov. Anat. Series.
9421.	Cook,	Geo. T.	M. D.	Lower lobe of right lung, showing a large hemorrhagic infarction of lower margin, one inch deep and 2.5 inches wide at base. Adjoining pleura shows adherent bands. A mulatto girl, age about 7. Death from pneumonia.	See A. M. M. No 1742. Prov. Path. Series and No 214. Prov. Anatomical Series.
9422.	Lamb,	D. S.	A. A. Surg. U. S. A.	Lower margin of upper lobe of left lung, showing marked emphysema. John F. Harris, a negro, age 75. Death from pneumonia.	
9423.	Harvey,	P. F.	Asst. Surg. U. S. A.	Portion of lower ileum somewhat thickened; Peyer's patches scarcely prominent, except at lower end of piece where a patch is thickened, deeply ulcerated, and shows a small perforation of peritonium. Around this opening and at intervals along the serous coat, are thick layers of pseudo-membrane. - Case of typhoid fever. James P. Harold, Signal, Service U. S. Army.	See A. M. M. Nos 1746 & 1747. Prov. Pathological Series.
9424.	"	"	"	"	
9425.	Lamb,	D. S.	A. A. Surg. U. S. A.	Eyes of kitten, showing large exudation in the posterior chamber, and staphyloma with opacity of cornea. Duration of disease a week or ten days.	See A. M. M. No 218. Prov. Anatomical Series.
9426.	Price,	C. E.	Asst. Surg. U. S. A.	Plaster cast of parts of right forearm and hand, showing surface appearance in fracture of radius, caused by fall from horse. Geo. H. Marshall, private, R. I. Cav.	See A. M. M. Nos 1749, 1750. Prov. Pathological Series & No 219. Prov. Anatomical Series.
9427.	U. S. National Museum	Baird, S. F. Dir.	"	Left lung of female monkey (Macacus Pelops), showing especially its upper lobe, tubercular cavities some pleuritic threads between lobes. Cause of death: Pulmonary consumption.	See A. M. M. 2552. Comp. Anat. also Nos 220 & 221. Prov. Anat. Series.
9428.	"	"	"	Portion of lung of Dolphin (Delphinus delphis) showing on surface, tubercular mass several lines in diameter.	
9429.	Magruder,	G. L.	M. D.	Heart, showing hypertrophy, dilatation and pericarditis. Aortic valve, composed of only two segments, anterior and posterior, the latter normal, the former very much thickened. Aorta, showing atheroma and dissecting aneurism. Aug. 8, 85.	
9430.	Pool,	B. G.	"	Liver showing two firm yellowish white tumors continuous with normal tissue, one occupies the flat left border; the other larger is 3 by 1.5 by 1 inches and extends obliquely through right lobe. - From a colored stillborn infant.	See also No 9431 this section and No 224. Prov. Anat. Series.
9431.	"	"	"	Portion of placenta, the fetal surface of which is studded with small thickenings of the membrane, probably inflammatory. From the same case as No 9430.	See also No 943 this section and No 224. Prov. Anat. Series.
9432.	U. S. National Museum	S. F. Baird.	"	Lower lobe of right lung, studded with cheesy tubercle and showing one large vomica. From a male monkey (Macacus sinicus), which died of consumption.	See A. M. M. 1753, 1754. Prov. Pathological Series also No 225. Provisional Anatomical Series.
9433.	"	"	Director	Portion of trachea and bronchial glands around bifurcation; one gland is enlarged to one inch in diameter and is filled with pus.	
9434.	Bovee,	J. W.	M. D.	Fused kidney, with two hilum and two sets of vessels. Colored man, age 44, died of heart disease (Dissecting aortic aneurism).	
9435.	Shadd,	F. J.	"	Right kidney and suprarenal capsule. Kidney normal. Suprarenal capsule converted into a soft cancerous growth 4 by 3.5 by 3 inches, adherent above to the liver. Renal vein and inferior vena cava occupied by blood clots which are closely adherent to the walls, and in some places there are thickenings of the inner coat, suggestive of incipient cancerous growth. From a woman, age 35.	See A. M. M. No 227. Prov. Anatomical Series.
9436.	Norton,	C. A.	"	Lower jaw-sec. of hen (Gallus Domesticus), showing new growth in mucous membrane of floor of mouth to left of tongue.	
9437.	Martigan,	J. F.	"	Portion of ileum showing oval opening of rupture, about one half inch in diameter. Patches of lymph plastered over peritonium. J. B., colored, age 36, kicked in abdomen.	

NO.	CONTRIBUTOR.		RANK.	SUBJECT AND PATIENT.	REMARKS.
9438.	Girard,	A. C.	A. Surg. U. S. Army	Portion of branch of -- brachial artery, showing aneurismal dilatation and thickening of wall from inflammation. Said to be sequel of fracture of humerus. Edgar Kendler, act. 10.	
9439.	Armstrong,	S. T.	P. A. Surgeon, U. S. Marine Hosp. Service	Left femur, showing oblique shot fracture in middle third; firm union with angular deformity and shortening. Also flattened bullet which was found encased in inner side of femur one inch above fracture. M. Stratten, a fireman.	
9440.	Flynn,	David	Mr.	Fifty three renal calculi found in the kidney of a cow.	
9441.	Egan,	P. R.	A. Surgeon, U. S. A.	Two hundred and eight larvae of fly removed from nose of ozænic patient. Edward, Martin, Pt. 4 th Cav.	
9442.	Robbins,	H. A.	M. D.	Skull of an 8 months infant, showing absence of large part of right parietal bone above and back of parietal eminence; defective development. Also complete double cleft palate. A white infant born at 8 months and lived two days.	See A. M. M. Nos 1770, 1773. Prov. Path. Series, and No. 244. Prov. Anatomical Series.
9443.	"	"	"	Portion of upper posterior part of cerebrum of an eight months fetus, born alive, showing a somewhat flattened sessile tumor of dura mater one inch in diameter and one half inch thick, which in recent state was soft, contained blood, and protruded through right parietal bone and scalp immediately to right of inferior parietal suture. This portion of dura mater is somewhat adherent to pia mater, in adjoining left parietal lobe is part of what seems to have been a sac wall, not connected with the tumor.	
9444.	Palmer,	G. S.	"	Portion of brain, including great ganglia of cerebrum pons and medulla; a patch of softening size of pea in internal capsule and adjoining posterior part of tubercles caudate left side. All arteries atheromatous; basilar markedly so; carotids also calcareous.	See A. M. M. Nos 1778, 1779. Prov. Patholog. Series, and No. 244. Microscopical Section.
9445.	"	"	"	Portion of right lobe of liver, showing gall bladder contracted to a mere tube; at site of fundus is firm adhesion to hepatic flexure of colon; on the colon side the mucous membrane shows deep pit-like depression suggesting a former opening into gall bladder, which the probe now fails to find. Mrs. Goodwin. Anæmia.	
9446.	Hartigan,	J. F.	"	Heart, weighing 5 oz.; showing shot lacerations involving both ventricles; oval opening one inch long in upper part of anterior wall of right ventricle; septum extensively torn; oval opening 1 1/4 inches long in posterior wall of left ventricle. J. C. --, colored, boy, age 14.	
9447.	Lamb,	D. S.	A. A. Surg. U. S. A.	Stomach, showing many black hemorrhagic spots and hemorrhagic ulcers from the most minute in size to one nearly one inch in diameter, situated on lesser curvature.	See A. M. M. Nos 1780, 1781. Prov. Pathological Series, No. 248. Prov. Anatomical Series, and No. 249. Microscopical Section.
9448.	"	"	"	Ileocolic portion of intestine. Vermiform appendix 3 inches long, dilated; in recent state it was a closed sac distended with a yellowish granular mass (implicated feces). Mucous membrane of its distal end destroyed over a space nearly one inch square. Mary Baltimore, act. 65, colored. Dementia.	
9449.	Kleinschmidt,	C. H. A.	M. D.	Dendritic tumor size of a large pea, removed from left side of uvula. Local preacher act. betw 60 & 70 years.	See A. M. M. No. 255. Prov. Anatomical Series.
9450.	Purvis,	C. B.	Surgeon in charge, Freedman's Hospital, Pathologist Govt	Stomach and spleen of a still-born male infant, showing small accessory spleen corresponding to a hiatus in anterior border of spleen. Infant weighed 5 lbs 10 oz.; lungs airless.	See A. M. M. Nos 1793, 1794. Prov. Path. Series
9451.	Blackburn,	J. W.	Hosp. for the Insane	Left kidney, enlarged, six inches long, three broad, two thick; capsule thickened and adherent; in section pyonephritic cavities are seen; remaining kidney tissue pale and indurated; glands at hilum much enlarged. Under much thickened and shows many ulcers, some extensive and deep. Michael, Michael, late Pt. H, 6 th Cav. Acute mania, passing into dementia.	
9452.	Tickett,	M.	M. D.	Lower third of left femur, showing cavity in inner condyle in front of inner ridge, the direction being from above downwards. In this cavity was lodged a bullet. The ridge shows exostosis. R. P. Clark, Pt. H, 4 th Pa. Cav. Wounded Jan. 27, 1865. Thigh amputated Sept. 17, 1883.	
9453.	Bliss,	D. W.	M. D.	Right kidney and adjacent lumbar glands. These are enlarged, in mass to six inches in length, three in breadth, two in thickness, and are cancerous; the disease has extended to and involved a large part of the kidney, which is enlarged. Unknown man, died March 6, 1886.	See A. M. M. Nos 1796, 1797. Prov. Pathological Series, No. 249. Microscopical Section.
9454.	Lamb,	D. S.	A. A. Surg. U. S. A.	Arch of aorta and branches and portion of trachea. The arch is atheromatous. Innominate artery shows an aneurismal pouch on left wall about three fourths inch in diameter projecting backwards against trachea, the anterior wall of which about three inches above bifurcation is eroded and is pressed into the lumen of the trachea, which is much diminished thereby. Sudden death from rupture of aneurism into trachea and consequent hemorrhage. Michael, Hahn, M. C. from Louisiana, died suddenly, May 8, 1886.	See A. M. M. Nos. 1798 & 1799. Prov. Path. Series.
9455.	"	"	"	Portion of liver, showing gall bladder atrophied and a small gall stone lodged in neck. Michael, Hahn, M. C. from Louisiana, died suddenly, May 15, 1886.	and including most of the articular surface. Patella atrophied and firmly ankylosed to front of outer condyle. M. Hahn, M. C. from Louisiana.
9456.	"	"	"	Left femur and patella. Femur shows spiral oblique fracture at middle of shaft with external angular deformity and new growth of bone; a second oblique fracture lower fourth, well united but curved anteriorly and with new growth of bone; shaft shortened and somewhat atrophied. Upper extremity shows new bone on front of neck, head & great trochanter. Lower extremity largely destroyed, especially outer condyle.	

NO.	CONTRIBUTOR.	RANK.	SUBJECT AND PATIENT.	REMARKS.
9457.	Radcliffe,	S. J. M. D.	Right kidney enlarged, and converted almost entirely into masses of soft cancer; in lower part are hemorrhagic clots. Capsule thickened and closely adherent to surrounding parts. Ureter somewhat dilated and contained a granular mass. - Mr. H. C. Pile, Oct. 57.	See also A. M. M. No 1800. Prov. Pathological Series.
9458.	Kuehling,	J. H. Mr.	Common mouse (<i>Mus musculus</i>), in abdomen of which are many capsules of cysticercus fasciolaris.	
9459.	Norton,	C. A. M. D.	Portion of ileum near ileo-colic valve, showing general sloughing ulceration. From a case of 'swine-plague'.	A. M. M. No 1808 Prov. Path. Series from this case.
9460.	"	"	Ileo-colic portion of intestine, showing irregular sloughing ulcers; mucous membrane thickened. From a pig which died of 'swine-plague'.	A. M. M. No 1809 Prov. Path. Series and No 259 & 260 Prov. Anat. Series are from this subject.
9461.	"	"	Gall-bladder of the same pig as 9460, showing minute ulcers of mucous membrane.	
9462.	"	"	Stomach, showing large sloughs beneath which are superficial ulcers. From 8 months old pig which died of 'swine-plague'.	
9463.	"	"	Portion of colon, showing many sloughing ulcers about one third inch in diameter. From same subject as 9462.	
9464.	Wortman,	J. L. Anatomist, Army Med. Museum	Bones of right leg of red-tailed hawk (<i>Buteo borealis</i>), showing united fracture of lower third of tibia and fibula; a large amount of provisional callus.	
9465.	"	"	Bone of right wing of a fish crow (<i>Corvus ossifragus</i>), showing fracture of ulna and radius, with partial union.	
9466.	U. S. National Museum	Baird, S. P. Director	Myo-fibroma from abdomen of a shad (<i>Alosa vulgaris</i>)	
9467.	Woodhull, Alf. A.	Surgeon, U. S. A.	Portion of right lung, showing secondary cancer nodules, size of small peas. Mrs. Shueby, Recruit "B", Gen. Service	A. M. M. No 1814 Prov. Path. Series is from this case.
9468.	Parsons, Mary A.	M. D.	Intestine, etc. of chicken (<i>Gallus domesticus</i>), showing large myxo-fibromatous tumors of peritoneum.	A. M. M. No 1815 Prov. Path. Series is from this case.
9469.	Johnston, W. W.	"	Portion of lung lower lobe, showing on convexity a deep transverse fissure fissure, corresponding to a mass of indurated tissue, partly cheesy and pigmented. Some old tubercles, mostly pigmented, and some emphysema; lung congested.	A. M. M. No 1817.
9470.	"	"	Right kidney of normal size, showing many pus pockets communicating with pelvis of ureter; some of the pus coagulated; surrounding kidney tissue indurated. Thickening and adhesions of capsule from perinephritis. Ureter of normal caliber, but occluded with concreted pus. Right suprarenal capsule small and cheesy.	Prov. Path. Series, and No
9471.	"	"	Bladder and internal genital organs. Bladder normal except no opening for right ureter. Prostate gland shows pus cavity, opening into urethra and extending upwards, backwards and to left 1 1/2 inches. Left seminal vesicles much enlarged, walls thickened; cavities filled with cheesy masses.	Microscopical Sect. are from this case.
9472.	Byrne, C. C.	Surgeon, U. S. A.	Uniform appendix, showing hour-glass contraction nearly midway of the tract; mucous coat of that portion which opens into caecum is thickened and deeply ulcerated; terminal portion nearly closed by contraction named, and filled with pus; its mucous membrane entirely destroyed by ulceration. Lieut. H. J. Hunt, U. S. Navy. Death from general tuberculosis.	A. M. M. No 1824. Prov. Pathol. Series. No 262. Provisional Anatomical Series, and No
9473.	"	"	Larynx and portion of trachea; mucous membrane shows many tubercles size of small pinheads projecting from surface; large ragged ulcer on under surface of base of epiglottis, another on each vocal cord, which was nearly destroyed; one in left cricoid portion; and several in trachea. From same case as No 9472.	Microscopical Section, are also from this case.
9474.	Parsons, Mary A.	M. D.	Uterus and appendages, covered generally with lymph. Right Fallopian tube, distal portion, dilated and filled with pus, which readily escaped from fimbriae and on pressure into peritoneum. Ovaries showed small aqueous cysts. Mrs. - Curaine, a white woman. Death from peritonitis.

NO.	CONTRIBUTOR.	RANK.	SUBJECT AND PATIENT.	REMARKS.
9648.	Cary, J.	M. D.	Salivary calculus, removed from Wharton's duct.	
9649.	Lincoln, N. S.	" "	Head of penis much enlarged by epitheliomatous growth and showing deep ulceration. James W. Johnson, a Virginian	
9650.	Hall, John A.	" "	Upper portion of right fibula, showing pistol bullet imbedded in its head; some loss of substance and some new bone. George Doane, citizen of Leadville, Col.	
9651.	Byrne, C. C.	Surgeon, U. S. A.	Section of liver, showing multiple abscesses and in condition of lardaceous degeneration. Mrs. Barnes, inmate of Soldiers' Home.	A. M. M. Nos 1834, 1835, Prev. Path. Series, and No. Microscop. Sect. are from this case.
9652.	Ray, Amelia M.	Miss.	Young chicken showing duplicity. <i>Diprosopus triophthalmus</i> .	
9653.	Wortman, J. L.	Anatomist, A. M. M.	Stomach of water-snake (<i>Prodidomotes dipedus</i>), showing many ascarides.	
9654.	Gilbert, C. B.	M. D.	Arch of aorta and thoracic and abdominal portions, showing cylindrical dilatation and extensive atheroma throughout its whole length. All loose connective tissue around the vessel and its primary branches was infiltrated with blood, some of which remains as clots. This hemorrhage was from a subperitoneal rupture of an aneurism of the coeliac axis. This aneurism measures 4 by 3.5 by 3 inches and communicated with the aorta through an opening in its anterior wall, over an inch in diameter. It has displaced the diaphragm upwards. Two branches of the axis are seen at the lowermost part of the aneurism; the third is not apparent, two small branches, one each side and widely separated, probably the phrenic, issue from about the middle. The upper probe marks the oesophagus, the lower, the superior mesenteric artery. Innominate artery and thoracic duct. John M. Long, late Capt. 1st Regt. Ill. Artillery (Military Academy, Washington).	A. M. M. Nos. 1841 to 1843, Prev. Pathol. Series are from this case.
9655.	Muntington, D. L.	Surg. U. S. A.	Head of deer, showing multiple short growths of each antler, velvet preserved, in place of true antlers. Believed to be due to castration.	
9656.	Parsons, Mary A.	M. D.	Left femur, patella, tibia and fibula, showing atrophy increasing from above downwards. The compact substance is thin porous, very friable; in some places so soft as to be cut with a scalpel without turning its edge; the cancellous substance appears as plates and fibres rather loosely held in a mass of yellowish white granular matter largely composed of fat, in some places of a gelatinous appearance, which fills all the medullary canals and spaces. The case appears to have been one of osteomalacia.	A. M. M. Nos. 1845 & 1847, Provisional Pathological Series, and No. 270 Prev. Anatomical Series, and No. Microscopical Section, are from this case.
9657.	"	"	Right kidney, cirrhotic; surface shows many minute aqueous cysts and about a dozen prominent yellowish masses, size of pin heads and larger, which on section, turned out granular matter; at lower end of kidney is a sarcoma size of small walnut, encapsulated and slightly encroaching on the kidney tissue.	
9658.	Palmer, G. A.	M. D.	Portion of skin and subcutaneous tissue from front of left side of chest, in situation of cicatrix from removal of mamma; skin is much thickened and of an irregular crusted nodular surface with a somewhat central groove like ulcer. Subcutaneous tissue shows small hard nodules. Can. of hard cancer.	A. M. M. No. 2, Microscopical Sect. is from this case.
9659.	"	"	Spleen of normal size, edges lobulated; shows several cancerous nodules size of hickory nut.	
9660.	Forbes, C. R.	Veterinary Surgeon	Chamignon removed from a two year old gelding.	
9661.	"	"	Portion of ileum of a male, showing cancer.	A. M. M. No. Microscopical Section is from this case.
9662.	"	"	Cartilaginous septum of nose of horse, showing long deep, irregular ulcers of mucous membrane. Bay Gelding.	
9663.	"	"	Right innominate bone of a horse, showing comminuted fracture involving acetabulum. A brown gelding.	
9664.	U. S. National Museum		Cranium, showing at left squamo-parietal junction an oval induration one half inch deep at the deepest and one inch in longest diameter. Probably occurring early in life. From an Inca, Acabamba, Peru.	
9665.	"	"	Calvarium, showing fissure of right frontal bone, beginning one inch above orbit and half an inch from median line, and curving upwards and outwards for two and a half inches, ending near coronal suture. The subject probably died soon after the injury was received. Styloid process unusually long. From Capt. Hope, Alaska.	
9666.	"	"	Calvarium, showing in frontal and parietal regions extensive loss of bone and several perforations. Syphilitic? From a prehistoric Aleutian, Chernofsky, Alaska.	
9667.	"	"	Calvarium, showing in frontal and parietal regions extensive hyperostosis, loss of substance and several perforations. Syphilitic? From Chernofsky, Alaska.	
9668.	Byrne, C. C.	Surg. U. S. A.	Portion of left side of vault of cranium, showing healed angular fracture of lower central part of parietal bone, the point of the angle being upwards and backwards. There is also depression most marked at the angle. Adam Schloffer, Inmate of U. S. Soldiers' Home, late 1st Regt. 2nd Div.	

NO.	CONTRIBUTOR.	RANK.	SUBJECT AND PATIENT.	REMARKS.
9669.	U. S. National Museum	Through Mr. Fred. A. Lucas	Left lung of a female monkey (<i>Macacus niger</i>), showing thickened patches and bands of inflammation of the pleura.	A. M. M. No. 9677. Pathological Section, A. M. M. Nos. 1880 to 1882. Prov. Path. Series and Nos. 280 to 283. Prov. Anatomical Series are from the same subject.
9670.	"	"	Portion of ileum of female monkey (<i>Macacus niger</i>), three feet from ileo-colic valve, showing invagination.	
9671.	"	"	Portion of ileum of female monkey (<i>Macacus niger</i>), showing Peyer's patches slightly thickened and with minute ulcers.	
9672.	"	"	Lower end of ileum and portion of colon of female monkey (<i>Macacus niger</i>). Solitary follicles are much enlarged and contained a dark pus-like matter.	
9673.	"	"	A group of mesenteric glands from female monkey (<i>Macacus niger</i>), enlarged and firm.	
9674.	Lamb, D. S.	A. A. Surg. U. S. A.	Stomach and small intestine of full grown female cat (<i>Felis domestica</i>), showing an enlarged mesenteric gland, 1.5 by 1 by 3/4 inches in size, which when cut, in recent state, discharged a milky liquid. There is a polypus, size of small pea, in small intestine. Otherwise, thoracic and abdominal viscera were normal.	A. M. M. No. 284. Prov. Anatom. Series, is from this case.
9675.	"	"	Tongue, larynx and portions of trachea and oesophagus; on anterior part of left vocal chord is a tumor - size of a pea quite movable on a narrow base; in recent state was bluish. Fungiform papillae, of back of tongue, enlarged. Thyroid gland large.	
9676.	Kilborne, F. L.	Veterinary Surgeon, Dept. of Agriculture	Group of lymphatic glands from neck, showing enlargement and yellow cheesy deposits, in some places softened to a pulp.	A. M. M. No. 1887. Prov. Pathological Sect. is from this case. For history see A. M. M. Nos. 9669 to 9673. Path. Sect.
9677.	U. S. National Museum	Through Mr. F. A. Lucas.	Spleen of a female monkey (<i>Macacus niger</i>), showing capsule thickened in patches.	
9678.	Palmer, G. S.	M. D.	Kidneys. Right, weight 2 oz., irregularly contracted; cortex somewhat diminished in thickness; capsule somewhat strongly attached; several cysts; one at upper end is size of hazelnut and with thick wall. Left kidney 1 oz., middle portion well developed; upper and lower portions show arrest of development. Both ureters dilated.	
9679.	Wood, M. W.	Asst. Surg. U. S. A.	Bladder showing opening of rupture, one half inch in diameter, in anterior wall, just posterior to entrance of urethra. - Joseph O'Brien, Ct. F. 2nd Cav.	
9680.	Yarnall, J. H.	M. D.	Portion of ileum of a child aet. 5, showing large sarcomatous tumor. Lewis Thomas, colored.	No. 898. Prov. Path. Sect. and No. Microscopical Sect. are from this case.
9681.	U. S. National Museum	Prof. D. R. Baird, Director.	Portion of ileum, from near the ileo-colic valve, showing invagination.	
9682.	"	"	Three tricocephalus dispar from coecum.	
9683.	"	"	Portion of liver showing in free edge a whitish worm doubled on itself, one half an inch long and 1/16 inch in diameter.	From an adult male African porcupine (<i>Hystrix cristata</i>).
9684.	"	"	Caecum and portions of colon and ileum mucous membrane of caecum and contiguous colon plastered with pseudomembrane. From a red acard monkey of Brazil (<i>Brachypus rubicundus</i>).	
9685.	From the collection of the late Professor J. N. Hamilton, New York, N. Y.		Plaster cast of lower part of right forearm and hand, showing rounded prominence 3 inches long, 2 wide and nearly one high, from a case of Colles' fracture. - Mrs. W. - aged 60 years.	Purchased by authority of the Surgeon General;
9686.	"	"	Plaster cast of right shoulder and parts adjacent. From a case of fracture of shoulder joint from a fall. Charles H. - aged 49 years.	"
9687.	"	"	Plaster cast of anterior aspect of left shoulder, side of neck and chest. From a case of fracture of clavicle by a fall. Hugh Harsfield, aged 57 years.	"
9688.	"	"	Plaster cast of anterior aspect of left shoulder side of neck and chest. From a case of fracture of clavicle by a fall. No name reported.	"
9689.	"	"	Plaster cast of anterior aspect of left shoulder, side of neck and chest. From a case of fracture of clavicle. Maria Quinn, aged 50 years.	"
9690.	"	"	Plaster cast of anterior aspect of right shoulder and side of neck and chest. From a case of fracture of clavicle. No name reported.	"
9691.	"	"	Plaster cast of front of left knee and adjacent thigh and leg. From a case of fracture of patella. Carl Abend, aged 30 years.	"

NO.	CONTRIBUTOR.	RANK.	SUBJECT AND PATIENT.	REMARKS.
9692.	Purchased from the collection of the late Professor J. W. Hamill- ton, New York, N.Y.		Plaster cast of anterior aspect of left knee. From a case of 2 fractures of patella.	
9693.			Dr. E. Cutter, N. York.	
9694.			Plaster cast of left elbow, posterior aspect, showing unusual prominence corresponding to fracture of olecranon process.	Edward Melody, aged 25 years.
9695.			Plaster casts of shoulders, base of neck and upper part of chest, anterior aspect. From a case of probable fracture of clavicle.	Name of patient not reported.
9696.			Plaster cast of anterior aspect of upper part of chest, base of neck and shoulders, showing dislocation of sternal end of clavicle.	Name of patient not reported.
9697.			Plaster cast of anterior aspect of left shoulder and side of chest, showing old subcoracoid dislocation of head of humerus. From a dissecting room subject.	
9698.			Plaster cast of portion of arm and forearm, flexed at an angle of 126°, showing partial dislocation outwards of bones of forearm.	Name of patient not reported.
9699.			Plaster cast of portion of right arm, forearm and hand, showing backward dislocation of bones of forearm, also Colles fracture.	Name of patient not reported.
9700.			Plaster cast of portion of right forearm and hand, of patient 18 years old, showing unreduced backward dislocation of ulna, which occurred at 5 years, from a fall. Salient unknown.	
9701.			Plaster cast of right foot and ankle of child, aged 4 years. Astragalus and three-fourths inch of tibia and fibula excised.	Name not reported.
9702.			Plaster cast of anterior aspect of right knee, and adjacent portions of thigh and leg. From a case of dislocation of head of tibia from a fall.	Wm H. —
9703.			Two plaster casts of anterior aspect of right side of chest, base of neck and shoulder, showing carbuncle over clavicle. In 9702 it appears as a livid, mound-shaped prominence. In 9703 the summit shows a livid centre with wide grayish areola, representing the expositure of the carbuncle.	Name not reported.
9704.			Plaster cast of some portion of the body, not determinable, showing a carbuncle several inches in diameter at base.	No history.
9705.			Plaster cast of anterior aspect of left knee, and portions of adjacent thigh and leg, showing "housemaid's knee".	Ellen Lee, aged 26 years.
9706.			Plaster cast of anterior aspect of right knee, and adjacent portions of thigh and leg, showing "housemaid's knee".	No history.
9707.			Plaster cast of anterior aspect of right knee, showing "housemaid's knee".	No history.
9708.			Plaster cast of lower part of face and portion of neck, showing mound-like swelling below and behind the chin.	Rogers, aged 16 years.
9709.			Plaster cast of alveolar processes of upper jaw, and roof of mouth, showing extensive congenital cleft palate, into which a Kingsley's artificial palate has been inserted.	No history.
9710.			Plaster cast of portion of upper jaw, and roof of mouth, including soft parts, showing on right side an epistoma two inches long, 1.5 inches wide and one inch thick.	No history.
9711.			Plaster cast of portion of upper jaw and roof of mouth, including soft parts, showing perforation of palatine vault, close to incisor teeth; the opening is 7/8ths inch long and 1/8th wide.	No history.
9712.			Plaster cast of face showing red, rounded, cylindrical mass, protruding from left nostril, 1 1/4 inch in diameter and nearly as much in length, said to be a fleshy polypus of nostril.	No history.
9713.			Plaster cast of face, showing a vascular lobulated tumor about 4 inches in the longest diameter and 2.5 inches in height, projecting from left orbit. Eye destroyed.	No history.
9714.			Plaster cast of left side of face, and portion of head and neck, showing vascular, ulcerated tumor, five inches in long diameter, 3.5 inches broad and 2 inches in height.	No history.
9715.			Plaster cast of right foot and ankle, showing large mound-like swelling over external malleolus. Said to be from a case of medullary sarcoma of ankle joint. A young child. Amputation above joint.	Just above and back of tumor is another, size of marble.
9716.			Plaster cast of anterior portion of left leg, showing about midway betw. knee and ankle, a prominent, rounded mass, 3.5 inches in diameter, 3/4 inch thick, surface irregularly flat and red & yellow.	Limb amputated. No history.
9717.			Plaster cast of female external genitals and adjoining portions of abdomen and thighs, showing two irregularly oblong, flattened, lobulated masses, separated by an oblique depression; involving the external labia.	No history.
9718.			Plaster cast of left auricle, showing a rounded, gentle prominence corresponding to a traumatic hæmatocoele, involving all but the lobule, tragus and portion of helix. Injury caused by blow from hand.	Name not reported.
9719.			Plaster cast of front of left side of chest, apparently female, showing a deep ulcer of the areola on upper, inner and outer sides of nipple. Small nodular elevations below nipple, and in axilla, probably secondary, and like the ulcer, cancerous.	No history.

NO.	CONTRIBUTOR.	RANK.	SUBJECT AND PATIENT.	REMARKS.
9720.	Purchased from the collection of the late Professor Dr. H. Hamilton, New York, N.Y.		Plaster cast of front of abdomen and adjoining portions of thighs, male, showing exstrophy of bladder, frustrated penis, epispadias and right inguinal hernia; scrotum flabby as if empty. No name reported.	
9721.			Plaster cast of right foot, showing hypertrophy of second toe, forming a tumor 2.5 inches long, 2 wide and 1.5 thick, with constricting furrow one half inch back of flat anterior end. - A boy, aged 8 years.	
9722.			Plaster cast of anterior portion of same foot as in 9721, after amputation of toe. (Cast taken 1 year later than 9721). A boy, aged 9 years.	
9723.			Plaster cast of forehead, showing red, hemispherical tumor, 1.5 inch in diameter, above inner side of orbit. - D., aged 24 years.	
9724.			Wax cast of neck of uterus apparently nullipara, showing whitish translucent tumor about 3/4 the inch in diameter, imbedded in and projecting slightly from surface of neck, near os. Probably a cystic distension of Nabothian gland.	
9725.			Plaster cast of lower part of face, showing on left half of lower lip a purplish tumor, 1 inch long, 3/8 the wide and 1/8 the thick, representing an angioma. No name reported.	
9726.			Plaster cast of kidneys in high relief; the right is 1 3/4 inches long, one wide and 1/4 the thick; its pelvis and beginning of ureter dilated and with a thickening suggesting calculus. Left kidney shows compensating hypertrophy. - G. B. -	
9727.			Plaster cast of central portion of face, showing absence of upper part of nose and instead a triangular opening, 1 inch high and 3/8 inch wide at base; parallel to long sides and at 3/8 inch distance are two lines showing place of incision for first step in rhino-plasty. Lower part of nose flattened and with two small openings, the nares. - Catherine Jones, aged 34 years.	
9728.			Wax cast of front of head and neck of a woman, showing result of rhino-plasty by torsion of flap from forehead; a fairly well shaped nose, with marginal linear cicatrices; triangular scar on forehead, causing but little disfigurement. No name reported.	
9729.			Wax cast of front of head and neck of a woman, showing loss of front half of nose, and result of rhino-plasty by torsion of flap from forehead; a prominent rather natural looking nose, turned somewhat to right. Irish woman, aet. 36.	
9730.			Plaster cast (taken two weeks after injury) of portion of calvarium of infant, showing concavity, over two inches long, 1 1/2 inches wide, 3/4 inch deep, with sloping edges; representing depressed fracture of right parietal bone. - R. Wilson, aged 5 months.	
9731.			Plaster cast of portion of left (?) side of chest, male, showing two inches external to nipple, a bright red irregular oval mass, 2.5 inches long, 2 wide and 3/4 thick, with somewhat constricted base. Probably epithelioma. Marked: Cancer. No name reported.	
9732.			Plaster cast of portion of arm, showing characteristic crusts of rupia. No name reported.	
9733.			Plaster cast of left side, of head and neck, showing artificial grouping of different forms of syphilodermata. No history.	
9734.			Plaster cast of front of lower abdomen, adjacent thighs and female genitals, showing large condylomata involving nearly the entire vulva; inguinal glands enlarged, the left more than the right and with a depression of surface as if discharging pus; about two inches above genitals are two small ulcers. Mrs. S. -	
9735.			Plaster cast of front of abdomen adjacent thighs and male external genitals, showing artificial grouping of venereal lesions.	
9736.			Plaster cast of lower abdomen, adjacent thighs and external female genitals, showing irregular, deep, phagedenic chancreoidal ulcer, 6.5 inches long and 4.5 wide, involving upper part of left labium, adjacent left thigh and lower abdomen; margin of ulcer shows bleeding granulations. Both labia much swollen. Marked: Forbush.	
9737.			Plaster cast showing four figures of "Blanders" in human subject. A. Left side of face. B. Outer surface of right nasal fossa, adjacent pharynx.	
9738.			Plaster cast of six portions of different viscera, showing lesions of tuberculosis. A. Apparently lung. B. Apparently spleen. C. Apparently lung. D. Apparently lung. E. Apparently kidney. F. Apparently spleen. No histories.	
9739.			Plaster cast of six portions of intestine: A. Of colon, from a case of acute diarrhoea. B. Of colon, from a case of acute dysentery. C. Of ileum, from a case of enteric fever. D. Of ileum, from a case of diarrhoea or fever. E. Of colon, from a case of dysentery or strangulation. F. Of colon, from a case of recovery from dysentery. No histories.	
9740.	Johnson, J. Taber	M. D.	Two small canine teeth in adjoining sockets and facing in opposite directions. One is entire and its socket shallow; the fang of the other is rudimentary and soft, the tooth was covered with a membrane and the socket nearly complete. Removed from a dermoid cyst of ovary. - Miss R., white.	A.M.M. No. 1945 Prov. Pathological Series is from this case.
9741.	U. S. National Museum	Prof. S. F. Baird, Director	Larynx and portion of trachea of young male Grivet monkey, <i>Cercopithecus sbeus</i> , showing minute tubercles in mucous membrane.	
9742.	Thompson, J. Ford	M. D.	Lower three fourths of right femur, showing fracture and spindle-celled sarcoma. Mrs. E., a white woman.	A.M.M. No. Microscopical section is from this case.
9743.	Lamb, D. S.	A.A. Surg. U.S.A.	Posterior portion of left cerebral hemisphere, showing apoplectic clot size of hazelnut in inferior parietal lobule. Henry Dodson, a negro.	A.M.M. No. 1986 Prov. Pathological Series and Not Microscopical section are from this case.
9744.	"	"	Bone varolii ant. medulla oblongata, showing irregular oval bone like tumor 7/8 inch long and 3/16 inch wide, situated in the front 3/8 inch beneath anterior surface and same distance to left of median line, just in front of superior bundle of cerebellum, apparently in the course of fibres of auditory nerve and ascending bundles of fifth. - From same subject as 9743.	
9745.	"	"	Eyes. The right much shrunken, sclerotic coat thickened and everywhere opaque, vitreous cavity occupied by rounded bony mass, 1/2 inch long, 3/8 inch wide, cupped anteriorly (corresponding with situation of crystalline lens). Left eye shows opacity of cornea and white opacity of lens. - From same subject as 9743.	

NO.	CONTRIBUTOR.	RANK.	SUBJECT AND PATIENT.	REMARKS.
9746.	Lamb, D. S.	A. A. Surg. U. S. A.	Right kidney: upper end shows irregular atrophy, probably congenital: medulla-cortical substance is here 1/4 inch thick, elsewhere 7/8 inch. From same subject as 9743.	A. M. M. No. 1986 Prov. Path. Series and No. Microscopical sect. are from this case.
9747.	"	"	Awaiting description by Dr. Lamb	
9748.	Cleary, Peter J. A.	Surgeon, U. S. A.	Portions of trachea and adjoining oesophagus; on left side of latter is a lacerated opening one inch long and one half inch wide, just above tracheal bifurcation. Dr. J. S. Williams, B. 10. Inf.	
9749.	Newton, R. C.	A. Surgeon, U. S. A.	Upper halves of left radius and ulna, showing characteristic atrophy of amputated ends. Geo. E. Hubbell, B. 10. 4. Cav.	
9750.	McClellan, Ely	Surgeon, U. S. A.	Two portions of ileum. 9750 shows a Peyer's patch, the lower half of which is normal; upper half shows perforation 3/4 inch in long diameter. 9751, twenty inches lower down, shows half a dozen ulcers, large and small, some undermining, others healing; one penetrates nearly to muscular coat. Pseudo-membrane on peritoneum of each piece.	A. M. M. No. 1985 Prov. Pathological Series is from this case.
9751.	"	"	Upper half of ileum. 9751 shows a Peyer's patch, the lower half of which is normal; upper half shows perforation 3/4 inch in long diameter. 9751, twenty inches lower down, shows half a dozen ulcers, large and small, some undermining, others healing; one penetrates nearly to muscular coat. Pseudo-membrane on peritoneum of each piece.	A. M. M. No. 1985 Prov. Pathological Series is from this case.
9752.	Johnson, J. Taber	M. D.	Uterus at term. Anterior surface. Upper portion shows delicate layer of pseudomembrane which adhered to abdominal wall; lower three inches contain eight interrupted silk sutures, around each of which suppuration was going on. Suture incisions well healed except where internally some stitches had failed to include the entire wall. Internal surface soft, denuded of mucous membrane and in recent state showed patches of red, yellow and blue; towards vaginal end are two pockets which contained pus, adjoining imperforate membrane gangrenous. Vagina shows deep sloughing ulcers. Mrs. J. G., colored.	
9753.	U. S. National Museum	Through B. Brown Goode, Asst. Sec. U. S. in charge of U. S. N. Mus.	Skull of a dog faced baboon (Cynopithecus porcaricus), between 2 and 3 years old, showing rarifying osteitis of nearly the entire cranium and lower jaw.	
9754.	Spackman, Mary D.	M. D.	Skeleton of a foetus at term, showing multiple intra-uterine fractures. Also soft parts of left limb, showing deformity and ossification corresponding to fractures of right side. Large congenital hydronephrosis of right spermatic cord.	
9755.	U. S. National Museum	Through G. Brown Goode, Asst. Secretary U. S. in charge of U. S. N. Mus.	Skull (minus lower jaw) of Inca, showing artificial flattening of frontal bone; in the flattened portion is an irregularly polygonal opening, 2.5 inches long by 2 wide extending from level of superciliary ridges to within 1 inch of interparietal suture 1 inch posterior to frontoparietal, is an irregularly oval opening 3/8 inch long; edges of marginal bone bevelled and cicatrized. Skull bent to left in occipital region; superior curved lines quite prominent; foramen magnum small. The smaller opening is supposed to have been made many years before death with a scraping brepine; in the place of the larger opening there was also probably a similar antero-morion operation and after death the piece of bone encircling the small opening was removed to be used as an amulet.	See Photograph No. 13 New Series A. M. M.
9756.	Byrne, C. C.	Surgeon, U. S. A.	Portion of dura mater on under surface of which are thin cotigula of blood adherent to the membrane. Wm. Osborn, an inmate of the U. S. Soldiers' Home.	A. M. M. No. 1987 Prov. Path. Ser. is from this case.
9757.	Adams, F. J.	A. A. Surg. U. S. A.	Fourth and fifth cervical vertebrae, showing ankylosis. From an Indian	
9758.	Burton, H. G.	A. Surg. U. S. A.	Skull, from which calvarium had been removed, showing multiple fissures radiating from foramen magnum. - Private D. M. Donald, B. 20. Inf.	
9759.	Tyler, Lachlan	M. D.	Fifth cervical vertebra, showing fracture of right lamina. - A colored waiter, age abt. 19.	
9760.	Tilton, H. R.	Surgeon, U. S. A.	Stomach opened along lesser curvature, showing general congestion. About halfway between the orifices is an opening in the greater curvature, 1/2 inch in long diameter, its edges and the gastric wall very vascular, red, and slimy, translucent, grayish white, and friable. Blood vessels shown by dark, arborescent lines. The softening and perforation are post mortem. The large size of opening being probably caused by post mortem handling. - Patrick M. Caffery, B. 10. 2. Cav.	A. M. M. Nos. 1929 & 1931. Prov. Pathological Series, are from this case.
9761.	Horton, S. M.	Surgeon, U. S. A.	Fourth and fifth cervical vertebrae, showing fracture of laminae of 4th and of laminae and body of fifth. - Wm. W. Mannis B. 10. 5th Cav. (or McIslands).	
9762.	Comfort, A. J.	A. A. Surg. U. S. A.	Rough concretion like dried shrunken mass of pus or of cheesy tubercle; weight 53 grammes. expectorated. Mrs. Mary Scott.	
9763.	U. S. National Museum	Through Fred. A. Lucas, Asst. Curator Dept. Comp. Anatomy.	Portion of anterior abdominal wall of female dog, (greyhound, aged 11 years), showing melanotic, sarcomatous tumors.	
9764.	Byrne, C. C.	Surgeon, U. S. A.	Stump of left leg, upper third, opened posteriorly, showing neuroma size of small pea on cut end of posterior tibial nerve. - James J. Kenny, B. 10. 1st. Cav.	
9765.	Armstrong, S. D.	Passed Asst. Surgeon U. S. Marine Hosp. Serv.	Right tibia; about midway of shaft is a marked forward curvature from healing after shot fracture; there is irregular thickening of bone for about 8 inches, and an oval depression at junction of upper and middle thirds; epistoses abundant along all the borders. - John M. Cude, said to be an ex. Vol. Soldier.	
9766.	"	"	Mesenteric glands much enlarged and indurated, forming a large nodular mass. Lymphadenoma. - J. Hall, Negro, abt. 24.	A. M. M. No. 2018 Prov. Pathological Series is from this case.
9767.	"	"	Left suprarenal capsule, much enlarged, showing firm, white mass occupying cortex. From same case as No. 9766.	
9768.	Waters, W. C.	Surgeon, U. S. A.	Bladder contracted, showing irregular rupture of posterior wall, extending up to apex, and about one inch in diameter. Peritoneum somewhat everted and partly covered with delicate pseudomembrane. - Wm. A. Kluver, Corp. B. 10. 14. Inf.	
9769.	Girard, A. C.	Asst. Surgeon, U. S. A.	Female foetus, near birth, with placenta. Head, thorax, upper limbs normal. Abdominal wall almost entirely protruded, enclosed in sac of peritoneum, and adherent to each other. Sac adherent to umbilical cord four inches long and adherent to left side of sac. Lower limbs slightly rotated backwards. Uterus bifid, up to umbilical region; consists of two covered membranous sac containing fluid and continued by membranous canal, size of crowquill, with spiracle canal.	

NO.	CONTRIBUTOR.		RANK.	SUBJECT AND PATIENT.	REMARKS.
9770.	Highway,	A. E.	M. D.	Left tibia showing hyperostosis of entire shaft; a few slight depressions where suppuration had probably occurred. Upper half shows abundant exostoses over all its surfaces. Joint not involved. Weight of bone 30 g. - From a negro.	
9771.	Bonticou,	R. B.	M. D.	Breastplate, imbedded in face of which are three rifle bullets, much flattened and otherwise deformed; edges of plate show two deep indentations from missiles, apparently bullets. From a soldier killed at Wilderness, Va. May 1864.	
9772.	"	"	"	Skull showing oval perforation, 1 1/4 by 3/4 inch in diameter, in apex of occipital bone; lambdoid fracture with elevation 1/4 inch high in left side of frontal bone. From a soldier killed at Chancellorsville, Va. May 1863.	A. M. M. No. 2099 Prov. Path. Series, is from this case.
9773.	"	"	"	Right tibia and astragalus; tibia osteoporotic throughout and ankylosed to astragalus. James Moffat, civilian.	
9774.	"	"	"	Right foot and malleoli, dried; lower portion of os calcis sawed off. Fourth metatarsus and phalanges absent. To illustrate Pirogoff's amputation as modified by Dr. Bonticou.	
9775.	Purchased from the col-			Lower end of right humerus, including the bone just above the condyles; resection for dislocation of elbow. J. T. Reily, aet. 7 years.	
9776.	lection of the late Professor			Large calcareous concretion; removed from elbow-joint during operation of resection. Wesley Myers, aet. 32.	A. M. M. No. 2118 Prov. Path. Series is from this case.
9777.	T. H. Hamilton, N. York, N. Y.			Head of right radius, showing marked hypertrophy, also head of normal radius for comparison. Mary, aet. 25, excision.	
9778.	Smith, Thomas C.	M. D.		Petrous portion of left temporal bone, showing oval perforation in posterior part.	
9779.	"	"	"	Cerebellum with pons and medulla; anterior part of left hemisphere contains small abscess cavity, which in recent state was filled with offensive greenish pus; abscess would contained minute hemorrhage. From same case as No. 9778.	
9780.	Lamb, D. S.	A. A. Surg. U. S. A.		Bones of face except lower jaw, showing cancerous ulceration; involving loss of maxillary sinus, and anterior portions of palati and alveolar processes of left side; and to a less extent of same processes of right side; also of much of left maxilar and lacrimal bones and of os planum, and all of left inferior turbinate bone; opening orbit inferiorly and left nasal fossa laterally. John Lynch.	
9781.	"	"	"	Calvarium showing erosions, perforations and exostoses, the result of syphilis. James C. Jenkins, colored.	
9782.	"	"	"	Lower part of brain. Left corpus striatum is much flattened, atrophied and softened; adjoining brain substance for some distance also much softened. Surface of corpus striatum in recent state was yellowish brown. Removed 9 months after a "stroke of apoplexy." Johnson, a Mulatto.	
9783.	Johnston, W. W.	M. D.		Ileo-colon portion of intestine. Vermiform appendix shows laterally an oval ulcerated perforation several lines in diameter, and a small opening at apex, also peritoneal adhesions. A large Peyer's patch of lymph is prominent. Grace Bradley, aet. 7 1/4, white.	A. M. M. No. 2247 Prov. Path. Series is from this case.
9784.	Byrne, C. C.	Surgeon, U. S. A.		Larynx and portion of trachea and oesophagus, with thyroid gland; opened posteriorly, to right of right arytenoid cartilage. Antero-posterior diameter at and below vocal cords reduced about one half. False cords otherwise normal; larynx cords the left one wrinkled, the right replaced by ulcer sacculi; larynx is nearly one inch long. Mucous membrane just below cords thickened and flamed. Opening of laryngotomy in crico-thyroid membrane, shows cicatricial edges. Trachea shows thickening and induration of mucous membrane. Lawrence Murphy, Col. R. A. C., 2d Cav.	
9786.	Edes, Robert T.	M. D.		} Specimens from a case of spindle and giant celled sarcoma of lumbar spine. A married woman.	A. M. M. No. Microscopical Section is from this case.

9789.	Lamb, D. S.	A. A. Surg. U. S. A.		Base of brain and cerebellum; showing marked atrophy of left corpus striatum and to a less extent of thalamus opticus. Ella Smith, a light mulatto.	A. M. M. Nos. 2287-2289. Prov. Pathological Series are from this case.
9791.	Purchased from J. Baretta, Paris, France			Wax composition model of face, showing on right cheek and nose a hypertrophic naevus.	
9792.	"	"	"	Wax composition model of right shoulder and arm showing bone, sebacea, punctated and pustular tubercles in groups. From the service of M. Guibout.	
9793.	"	"	"	Wax composition model of buttocks and posterior aspect of thighs, showing naevus verrucosus. From Gurl, aet. 5.	
9794.	"	"	"	Wax composition model of right foot, on dorsum of which is a papillary eruption consecutive to eczema. From the service of Dr. Bazin.	

NO.	CONTRIBUTOR.	RANK.	SUBJECT AND PATIENT.	REMARKS.
9795.	Purchased from J. Baretta, Paris, France.		Wax composition model of right side of thorax, shoulder and arm of a man, showing a large papular, desquamating syphilide.	
9796.	" " " " " "	" "	Wax composition model of right side of face and head, showing general molluscum (tumeur atheromateuse). From a woman aged 36 years.	
9797.	" " " " " "	" "	Wax composition model of left hand, showing on dorsum, psoriasis guttata. There is a sixth finger on the ulnar side.	
9798.	" " " " " "	" "	Wax composition model of left hand of a child, showing clubbing of the ends of the fingers, double phthisical.	
9799.	" " " " " "	" "	Wax composition model of right hand, on palm of which is an encrusted papular syphilide.	
9800.	Purchased from Jules Tabrich, Paris, France.		Wax composition model of head and neck of a man, showing absence of large irregular portion of frontal bone above the nose and left eye, opening frontal sinuses and exposing portions of frontal lobes, mainly the left. Conjunctiva deeply congested. From Edmond Turocques, Paris Nat. Guard.	
9801.	" " " " " "	" "	Wax composition cast of front of abdomen and thighs, showing two penises and two scrotums, with four testicles. From Juan B., a Portuguese.	
9802.	Parsons, Mary A.	M. D.	Finger laid open longitudinally; base of middle phalanx much enlarged and compact; medullary cavity nearly disappeared; one large cavity filled with pus. Edward Green, colored boy, aet. 16.	
9803.	Neale, R. A.	M. D.	Pylorus, duodenum and pancreas; the latter quite hard, cancerous and showing several dark vascular nodules of different sizes on surface.	See Catalogue, vol. 1, p. 472. (See also Vol. 1, p. 473.)
9804.	" " " " " "	" "	Left lung showing irregular, rounded, cancerous mass, probably medullary, two inches in diameter, in lower anterior part of upper lobe; adjacent pleuritic adhesions and contractions.	
9805.	" " " " " "	" "	Left kidney, sc.; supra-renal capsule enlarged to 3.5 inches in long diameter and 2 inches wide; outer part thick and firm, inner part soft and broken down; cancer. Lumbar glands cancerous.	
9806.	Wright, J. P.	Surg. U. S. Army.	Bodies of second to sixth cervical vertebrae inclusive; body of 5th fractured horizontally, and lower fragment dislocated backward, forming angular projection in spinous canal; hemorrhage into and around fragments.	See Catalogue, vol. 1, p. 472. (See also Vol. 1, p. 473.)
9807.	" " " " " "	" " " " " "	Spinal cord corresponding to 2nd, 3rd, 4th, 5th and 6th cervical vertebrae inclusive, showing transverse groove anteriorly; on section hemorrhage and softening were discovered for some distance above and below groove.	
9808.	Purchased from Jules Tabrich, Paris, France.		Wax composition model of right side of head, neck, shoulder and chest, showing destructive ulceration of forehead, side of face and neck, and a gradually narrowing space down the chest near median line. Right eye destroyed. August D., a Frenchman, injured by vitriol.	
9809.	Purchased from J. Baretta, Paris, France.		Wax composition model of right side of neck, shoulder and upper arm showing mycosis fungoides.	
9810.	" " " " " "	" "	Wax composition model of front of chest of a woman, showing patches of syphilitic circinated psoriasis.	
9811.	" " " " " "	" "	Wax composition model of dorsum of right hand and part of forearm, showing vesicular and bullous hydroa.	
9812.	" " " " " "	" "	Wax composition model of front of chest of man, showing large cicatricial keloid.	
9813.	" " " " " "	" "	Wax composition cast of outer side of right leg & foot, showing pemphig.	
9814.	" " " " " "	" "	Wax composition model of inner side of right leg & foot, showing black cornicated ichthyosis.	
9815.	" " " " " "	" "	Wax composition model of front of chest of man, showing patches of linear verrucosa.	
9816.	" " " " " "	" "	Three wax composition models: one of side of left hip and buttock; one of front of right knee; and one of back of right elbow, showing atrophic striae consecutive to severe typhoid fever, in a woman. Hip shows a scar of one of the ulcers.	
9817.	" " " " " "	" "	Wax composition model of back of right hand and wrist of woman or child, showing patches of scleroderma.	
9818.	" " " " " "	" "	Wax composition model of face of a woman, showing on both cheeks and continuing across the nose, a broad band of dark skin with dilated vessels. "Couperose variegata".	
9819.	" " " " " "	" "	Wax composition model of face of young woman, showing lupus erythematosus. Much of tip of nose is destroyed.	

NO.	CONTRIBUTOR.	RANK.	SUBJECT AND PATIENT.	REMARKS.
9820.	Purchased from J. Baretta Paris, France		Wax composition model of front of chest & abdomen of man, showing cicular eczema.	
9821.	" " " "	"	Wax composition model of right side of face of young child, showing xeroderma (literally dry skin). The entire side of face dotted with small brownish patches; on right side of nose is an ulcerating tubercle.	
9822.	" " " "	"	Wax composition model of right arm of an adult, showing patches of discoid eczema.	
9823.	" " " "	"	Wax composition models of face of boy aged 15 years, showing tubercular leprosy.	Duplicate of this received later & given the same number.
9824.	" " " "	"	Wax composition model of face of young person, showing Bouton de Risque, affecting nose, upper part of forehead and outer canthus of left eye.	
9825.	" " " "	"	Wax composition model of outer side of left arm, forearm and dorsum of hand, showing rupiform psoriasis, psoriatic alteration of nails; punctated psoriasis on back of hand.	
9826.	" " " "	"	Wax composition model of right leg and foot, showing actinurum.	
9827.	" " " "	"	Wax composition model of right arm, forearm and hand of an adult, showing fungoid mycosis.	
9828.	" " " "	"	Two wax composition models of right and left hands, dorsal surface, showing leprosy.	Duplicate of this received later & given the same number.
9829.	" " " "	"	Wax composition model of right side of face and neck of a man, showing non-parasitic sycosis.	
9830.	" " " "	"	Wax composition model of left side of face of old woman, showing an epithelial cancer of 1 1/2 inches in diameter with ulcerated surface.	
9831.	" " " "	"	Wax composition model of front of left arm of an adult, showing lichen planus.	
9832.	" " " "	"	Wax composition model of buttocks and adjoining portions of thighs of an adult, showing xanthoma.	
9833.	" " " "	"	Wax composition model of outer side of left leg of an adult, showing bullous and gangrenous purpura.	
9834.	" " " "	"	Wax composition model of front of abdomen and thighs of man, showing patches of impetigo.	
9835.	" " " "	"	Wax composition model of outer side of right leg & foot, showing psoriasis degenerating into eczema.	
9836.	" " " "	"	Wax composition model of face of a young person, showing ulcerating and vegetating lupus of rapid progress. Lupus apuberans of cheeks.	
9837.	" " " "	"	Wax composition model of lower part of face of a woman, showing rhino-scleroma.	
9838.	" " " "	"	Wax composition model of back of right hand & forearm, showing the skin disease called by American authors Keratosis pilaris and by the French pityriasis rubra pilaris.	
9839.	" " " "	"	Wax composition model of right and middle portions of front of adult female chest, showing in middle line consecutive patches of scleroderma.	
9840.	" " " "	"	Wax composition model of left and part of right side of face of man, showing sebaceous epithelioma in all degrees; on right side of nose is a large ulcer. Cancrioid acne, a senile variety of acne; epithelial acne; concrete or partial sebaceous acne.	
9841. to 9843.	Wells, Hon David A.		Three sections of elephant tusks, showing fracture and disease. 9841, shows a bullet imbedded. 9842, shows bullet in cavity.
